New brake pads and steering column by ART Grand Prix

ART Grand Prix introduces a series of new components to improve performance. After launching the new rear wheel hub in carbon-fiber designed and manufactured for KZ and KF class last month, which allows better performance thanks to its limited weight, ART Grand Prix introduces new brake pads and adjustable steering column.

The blue type brake pads allow for more braking power, are easier to mount, increase performance, and will be available for the same price of the standard ones (red type).

The adjustable steering column – an original and cost saving solution - allows as many as four different steering geometries by simply changing the lock plate. Also, with the adjustable steering column, customers will be able to adapt the kart by replacing the lock plate without having to purchase a brand new steering column. All ART Grand Prix products will soon be available for purchase.

The ART Grand Prix family wishes to welcome three new members that will represent the brand and service customers in Germany and Spain.

ART Grand Prix partnered with DP Racing to create ART Grand Prix Germany, which will oversee the distribution of ART Grand Prix products for the German and Austrian market.

RS Motorsport has been selected as the new exclusive dealer of ART Grand Prix products for the German market, and as authorized dealer for Austria.

Auto Replicas, based near Madrid and headed by Angel Burgueno, has joined the ART Grand Prix family as the new exclusive distributor for Spain & authorized dealer for Portugal.
